Gary, IN 46406

Dear Mr. Hagen:

Re: Disposal of Aluminum Dross from
U. S. Reduction Co., East Chicago

This letter acknowledges the request for continued disposal of the above referenced material as discussed with staff in a meeting of November 19, 1979.

Approval is hereby granted for disposal of 300 tons per day of milline dust and slag from U. S. Reduction Co. at the Gary Land Development, 45-C, Lake County, until June 15, 1980. This approval supersedes the approval of June 16, 1976. The waste is to be disposed of in a specially prepared disposal area, separate from the general refuse of the landfill, and covered with a minimum of 12 inches of cover soil by the end of the working day.

The approval is granted subject to the following conditions:

1. The generator and/or hauler must contact you to notify you of time of disposal (preferably prior to 3:00 p.m.) and conditions of shipment.
2. At least one foot of compacted soil will separate refuse from all aluminum drosses.
3. The working face of the dross disposal area shall be kept to a minimum and any dross not covered with soil shall be misted with water to control fugitive dust.
4. Progress reports will be submitted by U. S. Reduction Co. and Gary Development, Inc., to the Solid Waste Management Section before February 23, 1980, and again before May 24, 1980, explaining progress made to improve waste management and disposal practices.
